WHAT IS ETHEREUM?

The Ethereum network is a decentralized platform that runs smart contracts: applications that run exactly as programmed without any possibility of downtime, censorship, fraud or third party interference. These apps run on a custom built blockchain, an enormously powerful shared global infrastructure that can move value around and represent ownership.

WHY ETHEREUM?

Ethereum's blockchain technology is **decentralized** and open source; meaning the code is available for anyone to see and contributes to it's growing ecosystem.

Smart contracts are not just about financial transactions like paying for a flight ticket or receiving your salary; they can also be used for co-signing a **loan or renting out your house** through an escrow service.
